INFORMATION AND MANAGEMENT SUPPORT STAFF  
WEEKLY REPORT FOR PERIOD ENDING 03 JULY 1984

1. Progress Report on Tasks Assigned by the DCI/DDCI:

No tasks assigned during this reporting period.

2. Items or Events of Major Interest that have Occurred During the Preceding Week:

a. LIMS

1. A five-page LIMS questionnaire was prepared and forwarded to thirty six components that submit requests for materiel and/or services to the Office of Logistics. Responses to this questionnaire will provide valuable insight into customers access to terminals/printers, the system experience of those who will be utilizing LIMS and the approval process currently followed by each component. Customers have been asked to return completed questionnaires by 20 July.

2. A strategy for the successful completion of Critical Design Review (CDR) has been submitted by Booz Allen & Hamilton (BAH) and by the government. In addition to the numerous meetings that have already taken place between BAH and government user representatives since 12 June, when the first CDR was cancelled, several mini CDRs have been scheduled. At these sessions, BAH will brief smaller groups of users and demonstrate their understanding of our needs and the details of how these needs will be accommodated at BOC. Completion of CDR has been rescheduled for 26 and 27 July. The BAH project manager has stated that this delayed completion of CDR will not cause a slip in BOC which is still being planned for February 1985.

b. DAS

The Logistics Systems Division Engineering Review Board (LSD/ERB) met for the second time, 29 June. The essence of this meeting provided dialogue on the forthcoming testing of an ICS/CONIF enhancement that feeds funded 88 data to GAS, for the benefit of OF. This discussion led to a subsequent meeting which determined that this testing program is ill-prepared and requires more planning. The new LSD/ERB is already proving the merits of proper communication and coordination which are essential within the maintenance of OL/OF interfacing ADP systems.

c. Regulations

The following regulations were written, reviewed, commented upon, concurred in, or published during the past week:
